

Adrienne Moore

Senior Product Marketing Manager

GTM Systems Builder | Storyteller | Sales Enablement | [LinkedIn](#)

WHAT I DO

I go into markets that don't know your product yet. Before I build anything, I learn the domain: what buyers actually say, what's underneath the official objection, what makes a skeptical audience trust something new. Then I build the infrastructure that makes an unfamiliar product feel inevitable. I don't inherit playbooks. I write them.

CASE STUDY: INSTITUTIONAL MARKET GTM

Common App, Four-Year Member Market

2024 to Present

Built and executed GTM programs for Common App's established four-year institutional membership market, owning demand generation, product positioning, sales enablement, and pipeline development.

- Repositioned peer validation webinar series through refined messaging, format, and speaker strategy, making it the top-performing demand gen channel
- Achieved 43% average email open rates and 3.6-13.7% CTR against a 2% industry benchmark through deeply segmented, behavior-based campaigns
- Built automated lead qualification system in Salesforce Marketing Cloud after sales identified a core problem: they were going into calls blind. Designed an intake form using language pulled from years of real prospect responses, sorting institutions into three interest buckets and triggering tailored email nurture sequences. Sales monitored opens and clicks in real time, arriving at every call knowing exactly what a prospect cared about. Pitch time dropped, close rates rose
- Connected the system to Coffee with Common App, a peer-to-peer webinar series where existing members shared real data, growth wins, and roadblocks, converting long-tail prospects through trust and validation rather than a sales pitch
- Developed full enablement infrastructure: buyer persona framework, market segmentation model, lead scoring model, talk tracks by segment, sales playbooks, and battlecards
- Executed account-based conference strategy across multiple national conferences covering session development, co-presentation, booth strategy, and post-event outreach
- Authored the FY27 GTM Strategy adopted by leadership as the operating plan for market expansion

\$363K marketing-attributed revenue	60% webinar close rate	325+ qualified leads from conference strategy	21x email benchmark outperformance
--	----------------------------------	--	---

Result: \$363K in marketing-attributed revenue representing 48% of a \$755K pipeline. 11.6% lead-to-close conversion rate generating \$182K in revenue from the automated intelligence system alone. The system transformed how sales operated, replacing cold outreach with warm, informed conversations and turning a peer webinar series into the top-performing conversion channel in the pipeline.

CASE STUDY: COMMUNITY COLLEGE MARKET ENTRY

Common App, Net-New Market

2024 to Present

Architected Common App's first-ever entry into the community college sector, a net-new institutional market representing 39% of U.S. undergraduates, with no existing playbook, no research budget, and no organizational precedent.

- Began by learning the culture: mapped the AACC and ATD conference ecosystems, studied sector publications, and conducted primary qualitative research with presidents and VPs to surface the real language and trust structures of institutional decision-makers
- Built full GTM infrastructure from zero: buyer personas from primary research, messaging framework, conference strategy spanning AACC Annual and Achieving the Dream, sales enablement suite, landing page, one-pagers, and early adopter program
- Identified trust as the core conversion barrier and built all messaging and assets around earning it before asking for commitment
- Led conference strategy and co-presented with a member institution to establish peer credibility in a new market
- Secured first cohort of community college members

Result: First cohort secured. Full GTM infrastructure operational in a market with no prior presence. Sales enablement system, conference strategy, and peer validation program all built and running. Expansion strategy adopted by leadership as the operating plan for the next cycle.

CASE STUDY: TECHNICAL PRODUCT, SKEPTICAL BUYER

MeCision via Mouse and Matter Consulting

Built end-to-end GTM infrastructure for a mental health technology platform where the product was clinically sophisticated and the buyer was community-facing, stigma-aware, and slow to trust.

- Diagnosed trust as the core conversion barrier before building anything
- Developed positioning that held clinical credibility and human accessibility at the same time
- Built full messaging framework, sales enablement suite, and launch assets from zero
- Operated as solo builder with no inherited infrastructure or existing market research

Result: Full GTM infrastructure built and operational for a category where the product had to earn the right to be heard before it could sell.

WHAT I BUILD

Positioning	Messaging frameworks, persona development, ICP profiles, differentiation maps
Sales enablement	Pitch decks, battlecards, objection handling guides, talk tracks by segment
Launch infrastructure	GTM plans, launch briefs, asset suites, conference strategy, post-launch measurement
Content systems	Landing pages, one-pagers, email sequences, webinar series, case studies
Market intelligence	Competitive analysis, win/loss frameworks, after action reports, field research synthesis
Automated systems	Lead qualification workflows, behavior-based nurture journeys, Salesforce Marketing Cloud builds
